SUMMARY

BI developer with ten years of Qlik Sense, plus Power BI, SQL, dbt, Python and Databricks. I spent seven years in sales leadership at a veterinary and agribusiness distribution group with about 150 staff: as commercial director and partner, revenue doubled in under four years and I met every annual sales target, while building the Qlik apps its managers used every day. I know what a sales or finance manager needs to see, and how to model the data to show it.

EXPERIENCE

Co-founder & BI Developer · Informar Dados, Brazil (remote) · Feb 2024 – present

- Data and BI consultancy for small and mid-sized companies: finance, sales and HR dashboards (P&L, cash flow, KPIs) on a web platform with client login, built on data unified from spreadsheets and ERPs, with a chat assistant on the Claude API that answers from approved tables only.
- Built InfoCars, a pricing tool for used-car dealers: Python collects listings daily into PostgreSQL (about 250,000 ads; 5,114 model spellings standardised into 641 models) and Power BI flags overpriced stock. Sold to a dealer: about €300 saved per negotiation, time in stock cut to 1–3 months.
- Built Power BI reports for a driver-licensing clinic (P&L, daily cash, exams), published in the Power BI Service with scheduled refresh.

Data Engineer · Rover, IT and analytics consultancy, Brazil (remote) · Oct 2023 – Feb 2024

- Built and maintained a Qlik Sense app for a large home-goods retailer client: purchasing, replenishment for 17 stores and shelf availability, with forecast accuracy (Bias, MAPE) to show where stock was too high or too low.

Commercial Director & Partner · Central Veterinária, veterinary products distributor, Uberlândia, Brazil · Nov 2019 – Aug 2023

- Led sales and operations. Revenue more than doubled, from about €13M in 2019 to about €29M in 2023 across the two group companies (at 2023 exchange rates), and the annual sales targets were met in all four years. Three managers (pet distribution, call centre, e-commerce) and about 20 people reported to me.
- Developed and maintained the company's seven main Qlik Sense apps on Oracle, used by its 10 managers: sales, four business segments, daily cash-flow projection and sales-rep visits. Administered the Qlik site in the QMC (reload tasks, per-user stream access and security rules) and ran NPrinting: built the reports, set who received what, and checked the deliveries and the quality of the figures sent.
- Ran purchasing and negotiated supply agreements with multinational pharmaceutical manufacturers; led the data integration between the distributor and a manufacturer's sell-out platform.
- Owned tax planning for the group (two companies, two tax regimes, state VAT incentives); wrote the business and tax plan for Central Rural, the agribusiness company opened in 2019, and built the DCF valuation model for the partners' buy-out.

Commercial Manager · Central Veterinária · Aug 2016 – Nov 2019

- Managed the pet segment sales team of 10 (1 coordinator, 6 sales reps, 3 promoters); bought the products the team sold and owned tax, pricing and customer, demand and active-customer analysis. Kept developing the Qlik Sense apps.

BI Analyst · Central Veterinária · Aug 2015 – Aug 2016

- Built the data models and first versions of the company's main Qlik Sense apps. Promoted to Commercial Manager.

PORTFOLIO · GUILHERMERIGONATO.COM · 2026

Five projects from raw data to a published dashboard: dbt models with data tests, code on GitHub, a live Power BI report (PBIP/TMDL, checked in GitHub Actions against Microsoft's best-practice rules), a web dashboard with cross-filtering and a step-by-step Python notebook (pandas, Altair) for each; three of them also have the same app in Qlik Sense.

- **Sales director app for a distributor** · Qlik Sense, Power BI (dynamic RLS, calculation groups) · finds the region that fell 16.5% after a rep left and the rep giving 15% discount against 6%.
- **Budget vs actual for a group in four countries (FP&A)** · Power BI, Qlik Sense · EBITDA bridge and price-volume-mix show the group beats budget only because Portugal raised prices.
- **Portuguese public procurement** · 1.55M contracts, Power BI, Qlik Sense, Python, plus a Databricks lakehouse (Delta, Unity Catalog, Genie) · direct awards are half of all contracts but 17% of the money; tenders with a single bid close at 99% of the maximum price, against 79% with ten or more bids.
- **Retail sales and stock-outs (Walmart M5)** · 47.7M rows, dbt, Power BI · empty shelves cost about $0.79M a year.
- **Housing affordability in Portugal** · Eurostat API, Power BI · house prices rose 124% from 2015 to 2024, incomes 65%.

SKILLS

- **BI:** Qlik Sense (load script, data modelling, set analysis, section access, master items, QMC administration, NPrinting), Power BI (DAX, Power Query, time intelligence, dynamic row-level security, calculation groups, PBIP/TMDL, Tabular Editor, Power BI Service), star schema modelling, KPI design
- **Data:** SQL (Oracle, PostgreSQL, DuckDB), dbt with data tests, Python (pandas, Altair, statsmodels, Jupyter, web scraping, REST APIs, pytest), Databricks (Delta Lake, Lakeflow, PySpark), ETL, Parquet, Excel
- **Engineering and AI:** Git, GitHub Actions (CI), Claude and OpenAI APIs, text-to-SQL
- **Business:** sales and pricing analysis, budget vs actual, price-volume-mix, forecast accuracy, receivables ageing, purchasing, tax planning, DCF valuation, sales team management
- **Languages:** Portuguese (native), English (B2, professional working proficiency)

EDUCATION AND CERTIFICATIONS

- Microsoft PL-300 Power BI Data Analyst · exam scheduled for 27 Nov 2026
- Postgraduate programme in Enterprise Data Science & Analytics · NOVA IMS, Lisbon · admitted, starts Feb 2027
- Specialisation in Business Intelligence · Academia IN · 2016 · BSc Business Administration · Universidade Federal de Uberlândia
